

vDefend Deploy (Greenfield) — Service Brief

Last updated: 2026-02-14

Service Identification

- Service Name: vDefend Deploy (Greenfield)
- ISV Name: Broadcom
- Product Name: VMware vDefend
- Service Family: Platform Security Services
- Service Type: Outcome
- Service Code: BC007

What This Service Does

Deployment of VMware vDefend to establish a supported, baseline security posture for VMware Cloud Foundation environments.

This service deploys and configures VMware vDefend to provide foundational network and workload security within a VMware Cloud Foundation environment. The engagement focuses on installing vDefend components, integrating with the underlying platform, and validating baseline security functionality using supported configurations. The service does not include application-specific policy design, security operations, or ongoing tuning.

What This Service Does Not Do

- Application-specific security policy design
- Custom rule development or tuning
- Security operations, monitoring, or response
- Compliance certification or audits
- Ongoing security management

When This Service Is Appropriate

- Adoption of VMware Cloud Foundation
- Introduction of security requirements for private cloud environments
- Platform security review identifying missing baseline controls
- Preparation for future application onboarding or compliance initiatives

When This Service Is Not Appropriate

- Expectations for application-level policy design or tuning
- Requirement for compliance certification or audit outcomes
- Desire for ongoing security operations or managed services
- Environments requiring immediate remediation of active security incidents

Required Customer Inputs

- Operational VMware Cloud Foundation environment
- Required vDefend license entitlements
- Network and identity services available for integration
- Customer participation for validation and acceptance

Outputs Produced

- Installation and configuration of vDefend components
- Integration with VMware Cloud Foundation platform services
- Baseline policy configuration using supported defaults
- Validation of vDefend functionality

Available Variants

BC007-S

2-3 weeks

Price: \$18,563

Low-complexity vDefend deployment focused on establishing a baseline, supported security platform with minimal integrations and standard deployment patterns.

BC007-M

3-5 weeks

Price: \$40,440

Moderate-complexity vDefend deployment requiring additional integrations, broader platform coverage, and increased coordination to support expanded security needs.

BC007-L

5-7 weeks

Price: \$76,770

High-complexity vDefend deployment involving multiple security domains, complex integrations, and extensive validation to support a broad platform security footprint.

Notes

Variants represent **scope or complexity**, not staffing.

Duration is indicative only and must not be used as a sizing proxy.

All prices USD.
