

## F5 to Avi Migration — Execution Model Snapshot

Last updated: 2026-01-13

### Service Identification

- Service Name: F5 to Avi Migration
- ISV Name: Broadcom
- Product Name: VMware Avi
- Service Family: Application Networking Platform
- Service Type: Outcome
- Service Code: BC005

### How the Work Is Performed

This service migrates application delivery services from F5 to VMware Avi using a standardized, repeatable migration approach. Each engagement unit focuses on analyzing an existing F5 configuration, translating supported functionality to Avi, implementing the migrated service, and validating basic traffic handling. The service does not include application refactoring, advanced traffic optimization, or long-term operational support.

### Purpose

Defines how BC006 is executed in practice, including delivery approach, customer responsibilities, dependencies, and completion criteria, to set clear expectations and reduce delivery risk.

### Dependencies and Prerequisites

- Each migration unit targets a single, well-defined application delivery service
- Supported feature parity exists between F5 and Avi for the target service
- Required access to existing F5 configurations is available
- Application behavior remains unchanged during migration
- Migration sequencing and validation participants are available
- Operational Avi platform available
- Access to existing F5 configurations
- Supported feature parity between F5 and Avi
- Customer participation for validation

### Customer Responsibilities

- Operational Avi platform available
- Access to existing F5 configurations
- Supported feature parity between F5 and Avi
- Customer participation for validation

## What Happens if Dependencies Are Missing

If required inputs or prerequisites are not met, delivery may be paused until gaps are resolved. Delays caused by unmet dependencies may affect overall timelines.

---

### Exit Criteria

- Assessment of existing F5 service configuration
- Translation of supported features to Avi Deployment of migrated service on Avi
- Basic validation of traffic flow
- Application delivery service migrated to Avi
- F5 dependency reduced Avi platform adoption advanced incrementally
- Migration performed using supported configurations
